

# Resonance Bastion — campaign result contracts

2026-10-07 · build 0.2.4-campaign-result-contracts. This increment develops the reliable campaign-result foundation, then its progression and recovery arithmetic. Full 360° travel and the approved visual direction are retained. The original blueprint and existing combat art are unchanged.

## What is now implemented and tested

The ordinary-run transaction framework captures a checkpoint and allocated run ID, restarts the same attempt, and abandons it without partial rewards. Terminal results are immutable. They are journaled before a separate atomic commit applies the validated campaign, claims and receipt. Retrying a committed result reads its receipt without paying again, including after a lost acknowledgment and reopen. Recent receipt details are bounded; their removal cannot make old sequences payable. Preparation and tutorial starts cannot race an active ordinary attempt.

A deliberately synthetic browser adapter tests these boundaries using a 37-Credit fixture. It is test tooling, not a campaign encounter or actual reward calculation. The production gameplay adapter still needs real body, permanent/temporary stock, contributions, progression and compiled reward metadata. No normal paid launch button is exposed and tutorial practice still awards zero rewards or persistent injury.

## Progression and recovery details

The rank and cumulative asset XP tables are pinned as integer content. Independent 70/100-digit Decimal derivations agree, including all published asset XP references. Exact 70% participation plus 30% contribution allocation preserves the whole pool, uses deterministic ID ties, caps catch-up, excludes ineligible/capped participants and reports newly capped excess as unused XP. Multi-rank advancement and zero-body level-up behavior have explicit boundary checks.

Specified growth matches the Sentry Level 100 / Enhancement 10 reference: 2652 maximum Integrity, 85197/1024 damage, 9421/1024 GU range and a 38-tick weapon interval. Support and beam cadence stay fixed. Health growth preserves existing wounds, and zero body remains zero. Enhancements remain explicit purchases.

Exact recovery quotes cover individual/partial repair, restoration, wear-adjusted sale and permanent-charge rearm. The Warden's base cost of 500 is applied where specified, and selling the last owned Warden is rejected. Refund locks and paid Promotion Core deposits stay separate from body damage and Credit investment. These are arithmetic kernels; their player commands and emergency reconstruction have not been presented as complete features.

## Verification

Strict types, lint, deterministic headless checks and production build passed. All 87 unit tests passed across 18 files. The stable full browser run passed 34/34 in 3.8 minutes, including eight native ordinary-run transaction fixtures. An earlier launch overlapped a rebuild and received one 404; the complete stable rerun passed without skips or retries.

The growth/conservation audit records 100 level samples and 512 deterministic wide-integer allocation/permutation cases. These validate arithmetic rather than whole-game win rates or the future contribution collector. The unchanged playable slice remains construction plus autonomous Bulwark/Bastion tutorial practice.

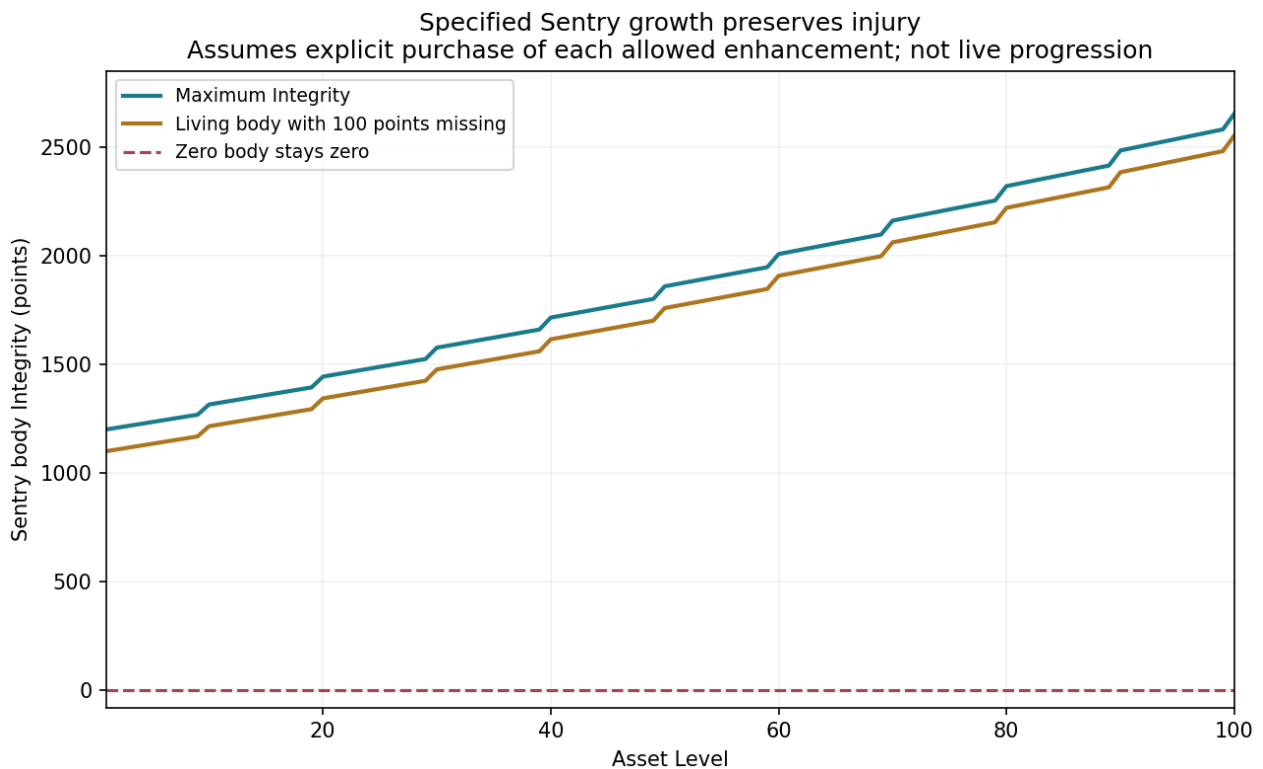

## Blueprint clarification needed

The blueprint gives Sentry accuracy as 90% at Level 1 and 95% at Level 100, and says ordinary weapons gain accuracy with level. It supplies no accuracy-growth formula. The proposed rule is a linear +5 percentage points over Levels 1-100 for accuracy-based weapons, capped at 100%; inherently unmissable attacks stay unchanged. That proposal awaits your input and has not been applied.

Next engineering dependencies are the versioned campaign-profile migration, real contribution/body/stock capture, production result adapter and complete run/receipt backup-import plus recovery screens. Endurance, emergency reconstruction, full records, per-asset contact/animation work and the remaining roster remain open. Physical Lenovo performance, native Android sharing and TalkBack still require actual device checks. No public playable deployment is claimed.

# Specified growth, preserved wounds

The plot uses the exact tested growth kernel. Upgrades shown are assumed purchases, not automatic or free grants. A living injury remains 100 points below the new maximum; XP cannot revive zero body. Existing player combat has not been changed.

## Sentry Level 100 / Enhancement 10 reference

| Field             | Verified value                                      |
|-------------------|-----------------------------------------------------|
| Maximum Integrity | 2652                                                |
| Per-shot damage   | $85197 / 1024 = 83.2001953125$                      |
| Weapon interval   | 38 ticks = 0.633333... seconds                      |
| Range             | $9421 / 1024 = 9.2001953125$ GU                     |
| Accuracy          | 95% reference; growth equation awaits clarification |
