

Resonance Bastion — current development review

2026-10-07 | Application build 0.2.0-tutorial | Review status: Awaiting User Review

The current milestone is the working autonomous tutorial. Construction is complete for its foundation milestone; the ordinary campaign progression loop comes next. This review shows the recovered, verified build, not a new game feature or a replacement design. The uploaded final blueprint is unchanged.

What works now

- Three campaign slots, owned assets, purchases and deployment, placement and route validation, Undo/Redo, and save/reload with failed-write protection.
- Four camera orientations; separate Fit Base and Fit Field; strategic role markers and named selection; portrait/landscape construction layouts.
- Durable text scale, high contrast and reduced-effects preferences.
- Bulwark with Bastion doctrine in a disposable tutorial clone. Core, Sentry, Rifle Squad, Repair Node, Barricade and Mine face Runner and Raider enemies.
- Autonomous movement, attacks, projectiles, damage, support and encounter completion. Pause, speed, camera and inspection are battle controls; units do not require manual orders or button-triggered attacks/abilities.
- A 24-enemy / 30-TP tutorial schedule, checkpoint restart after interruption, durable practice results and competing-tab protection. Tutorial Practice awards no campaign currency/XP and leaves the real fortress undamaged.
- Original candidate combat sprites, animations and effects; three music cues, thirteen SFX/UI/alert sounds and two stingers, with volumes/mute/captions.

What remains

Next is Gate 3: the ordinary campaign save/reward/recovery loop. Begin with unique run identities and atomic result receipts that cannot pay twice after a retry, interruption or competing-tab takeover. Then integrate persistent damage, repairs/restoration, rewards, XP/progression and complete backup/import/rollback.

Other Warden/doctrine combinations, the full roster, bosses and campaign/modes, the remaining soundtrack, full menus/tutorials/accessibility and release follow their dependent milestones. The current practice export is not a full campaign backup. There is no verified public playable URL or offline-ready release.

What this review contains

The PDF contains this report, ten current runtime views, and six sprite-direction/animation contact sheets. The complete ZIP also contains original screenshots, four

movement GIFs, all eighteen WAV files, a live-combat video of the opening encounter, a gallery and capture metadata. These are actual runtime/atlas assets, not promotional artwork. Raw screenshots are retained unchanged; PDF pages fit them proportionally, so zoom the PDF to inspect the source detail.

The static screenshots were taken from the actual development runtime at 800x1280 and 1280x800, with normal/200% text, all four orientations and default/high-contrast/reduced-effects presentation. The video is a separate production preview recording; it has no recorded system audio, so review the WAVs separately. Movement GIFs inspect real atlas frames, not a full combat recording.

Start with the PDF; use the ZIP for movement and listening. Local HTML opening on Android has not been verified, so the PDF and individual images/GIFs/WAVs/video are the review fallback. These files are a review, not an installable or playable game. Desktop recording frame rate does not measure Android performance.

What I need from you

No missing gameplay rule or balance decision prevents starting Gate 3; the blueprint already supplies those contracts. The useful feedback at this stage is:

1. **New combat artwork and motion:** which Rifle/Bulwark/Runner/Raider poses, Sentry aim views, movement/attack/hit/down cues or effects need correction? Are allies and enemies recognizable, and does the new work fit the approved fortress foundation? Name a page, file or video moment if something looks wrong.
2. **Readability:** are overview/tactical views and text comfortable on your device? Identify anything too small, dark, crowded or visually confusing. Reviewing screenshots is useful feedback, not proof of live touch performance.
3. **Audio:** do the music and sounds fit the intended game? Identify any cue that feels wrong, repetitive, harsh or too loud. Listening approval has not already been inferred from successful audio decoding.
4. **Device context, if known:** phone/tablet model and browser; Android version if convenient. This helps prepare later real-device checks. You do not need a PC or to run development commands.

You can respond: "Visuals: ... / Readability: ... / Audio: ... / Device: ...". "Keep these candidates for continued development" is distinct from full-roster or release approval; request specific changes where needed. Existing Gate 1 foundation approval stays in force. New combat candidates will not be propagated across the roster merely because the earlier foundation was approved. Independent campaign-persistence work can continue while this creative feedback is pending.

Verification and provenance

Recovered gameplay checkpoint: 6d6c8e283fa809a4622b50c358235156ab820cb3.

Recovery/reference checkpoint at packaging:

18868fa8afbb1f0a0a17caf0ae79dfcf814074b1. No gameplay changes are introduced

by this review delivery.

Fresh checks in this session passed: 29 unit tests, 19 production browser tests, strict types/lint/format/build, source/asset/audio validators, and the real tutorial replay in five execution groupings. Every grouping wins at tick 6150 with 24 kills / 30 TP and the prior canonical simulation hash. Browser tests verify enabled/muted outcome equivalence, checkpoint restart, failed-result retry and competing-tab protection. Live screenshot/gallery/audio checks also passed.

Desktop Chromium 151.0.7922.173; Node 24.19.0. Physical Android speed/thermal/memory/touch/background/storage behavior and TalkBack still need device evidence. Candidate approval, final presentation, public deployment and offline readiness remain open. The brighter Gate 1 ZIP is an earlier reference; it does not describe the latest tutorial's implementation status.

Further detail: ../STATUS.md, ../TASKS.md, ../TEST_EVIDENCE.md, ../PROJECT_RECOVERY.md and USER_VISUAL_APPROVAL.md.

An isometric view of a game map. The map is a dark blue grid with a central base structure. The base is surrounded by several smaller structures and units. There are four numbered markers on the map: 1, 3, 5, and 6. Marker 1 is at the bottom right, marker 3 is at the bottom left, marker 5 is at the top left, and marker 6 is at the top right. The base is in the center, with a green circle and a crosshair over it.
